

ESCO® V-Bottom (VXDP) Excavator Buckets

Specializes in Trenching Shale, Frozen Ground, Limestone and Caliche
March 2023

ESCO is known and trusted to deliver durable buckets for construction class excavators that provide superior productivity with lower maintenance requirements and less unplanned downtime over conventional bucket designs. Our newest offering is a V-bottom bucket (VXDP) for tough pipeline and trenching projects that demand reliability and performance.

The ESCO V-bottom bucket is modeled after our extreme heavy-duty (XDP) plate lip bucket which is a field-proven performer in demanding applications. It is available for 25 to 30 metric ton hydraulic excavators.

Developed for trenching shale, frozen ground, limestone and caliche, the V-bottom bucket comes standard with Ultralok® twin-pick teeth for exceptional penetration to complete jobs on schedule. The Ultralok tooth system features a hammerless integral lock which allows fast, simplified tooth replacement with an off-the-shelf pry tool. The bucket features a new weld-on adapter style developed specifically for V-bottom buckets.

The bucket also features AR400 full bottom wear runner and full side wear plates, and a T-1 steel plate lip and side reinforcing plates. The result is specialized bucket that performs with minimal maintenance.

About Weir ESCO

ESCO is a leading designer, manufacturer and provider of highly engineered wear and replacement products and services essential to the performance of our customers' equipment used in mining, construction and industrial applications. ESCO celebrated its 100-year anniversary in 2013. In the past 100 years ESCO has continually produced innovative products for its customers. Acquired in 2018, ESCO is now a division of The Weir Group.
